Welcome to Linux From Scratch!

Linux From Scratch (LFS) is a project that provides you with step-by-step instructions for building your own custom Linux system, entirely from source code.

Currently, the Linux From Scratch organization consists of the following subprojects:

LFS :: Linux From Scratch is the main book, the base from which all other projects are derived.

BLFS :: Beyond Linux From Scratch helps you extend your finished LFS installation into a more customized and usable system.

ALFS :: Automated Linux From Scratch provides tools for automating and managing LFS and BLFS builds.

CLFS :: Cross Linux From Scratch provides the means to cross-compile an LFS system on many types of systems.

Hints :: The Hints project is a collection of documents that explain how to enhance your LFS system in ways that are not included in the LFS or BLFS books.

Patches :: The Patches project serves as a central repository for all patches useful to an LFS user.
